# Presentación

Todas las obras deben ser fruto de una experiencia, de un conocimiento y de una reflexión. En esta ocasión el lector tiene en sus manos un libro que reúne los tres requisitos apuntados. Además tiene como mérito que ha sido elaborado para servir a un profesional que hace de su quehacer diario un arte: el enólogo.

Con el interés, por consiguiente, que fuera útil en la bodega, este libro posee la ventaja de haber sido escrito por un enólogo que ha prestado servicio a un buen número de bodegas, que ha vivido vendimias y vinificaciones, y conocido la utilidad del control analítico sobre un producto en periodo de evolución.

Una obra como esta, no se escribe sin un buen bagaje de conocimientos. El autor que ha desarrollado sus conocimientos como técnico analista durante muchos años, en una Estación de Viticultura y Enología, concretamente en la de Vilafranca del Penedès, es claro ejemplo del servicio que estas instituciones, repartidas por todo el territorio español, ofrecen al sector vitivinícola.

En las Estaciones Enológicas la función de los técnicos, como el autor, no se circunscribe tan solo en realizar su trabajo de analista, debe también ejercer otras funciones: estar debidamente informado de las novedades analíticas, de los problemas que vive el sector y de sus posibles soluciones, transmitir la información a la institución, colaborar en los proyectos de investigación o experimentación y también, en la medida de lo posible, crear escuela.

La personalidad del autor de este libro, le ha permitido cumplir con creces muchos de estos encargos tácitos, siendo además evidente su inquietud por ampliar conocimientos y transmitirlos, hecho que todos los que con él nos relacionamos podemos constatar.

Este minucioso trabajo es también consecuencia de la reflexión que conlleva el conocer, profundamente, a quién va dirigido. Es fácil localizar en la memoria del lector, tres obras de este autor que han formado parte de la biblioteca de numerosos laboratorios enológicos. Debe hacerse mención también que esta obra adquiere un nivel óptimo, en cuanto a metodologías actuales en análisis de control rutinario y de investigación. Es decir sirve al enólogo en su labor diaria y permite, a él y a otros estudiosos, penetrar en trabajos de control mucho más sofisticados y con técnicas más fiables.

Se recogen en esta obra, los métodos analíticos de la mayoría de compuestos que pueden formar parte de una caracterización enológica, tanto aquellos que se encuentran tras un proceso normal de vinificación como aquellos que son contaminantes, bien sean accidentales (estireno, residuos antocriptogámicos, etc.) o voluntarios (ácido salicílico, edulcorantes sintéticos, etc.).

No están contemplados todos los componentes del vino porque ello supondría entrar dentro del ámbito de la investigación, utilizando el análisis como finalidad más que como herramienta para el apoyo a la producción. Aunque la componente práctica de la obra resalta en cualquiera de sus páginas, hace despertar en las personas más receptivas, la inquietud hacia el mundo de la enología y les introduce en la complejidad de los productos vitivinícolas, cuyo máximo exponente es el vino, y siempre en constante evolución bioquímica.

Con relación a sus trabajos anteriores el autor en esta obra da entrada a métodos instrumentales: cromatografía de gases, espectrofotometría de absorción atómica, espectrofotometría visible y ultravioleta, etc. Es decir, aquellas metodologías que ya comienzan a estar presentes en laboratorios de grandes empresas y de todos los centros oficiales. Otras técnicas, incluida la cromatografía líquida de alta resolución, espectrofotometría de infrarrojo, etc. han sido soslayadas por el autor y límites de esta obra.

La situación política en la que está inmersa nuestra comunidad vitivinícola, hace que las referencias a los métodos oficiales, deban surgir de su misma organización. Por ello, todo tratado como éste, que

se precie de actual, debe recoger la metodología analítica de la Comunidad Económica Europea, cuyos métodos son en su mayor parte propuestos o aprobados por la Oficina Internacional de la Viña y el Vino (O.I.V.).

Como toda obra de éste carácter es difícil decir que un trabajo ha salido a la luz totalmente a gusto del autor y actualizado al máximo. Sin embargo, este libro aporta una de las recopilaciones más exhaustivas que sobre análisis de productos vinícolas se han realizado en los últimos tiempos. Es a mi modo de entender un buen trabajo, un buen servicio a la enología y a la analítica y un magnífico nexo de unión entre ambas.

Santiago Mínguez Sanz  
Estación de Viticultura y Enología  
Institut Català de la Vinya i el Vi

Vilafranca del Penedès, mayo de 1990.

# Introducción

Este libro pretende ser una ayuda al analista de vinos, enólogo y bodeguero, al presentar una serie de metodicas que han sido escogidas, de las múltiples que existen, pensando en la exactitud y sencillez de trabajo. Se ha procurado evitar las técnicas instrumentales más complejas, como: Resonancia Magnética Nuclear, Espectrofotometría en Infrarrojo, Radioquímica y en ella se incluirían las técnicas con el carbono radioactivo ( $C_{14}$ ), etc. A pesar de ello, es de esperar que cumpla con la idea en la que fue concebido este libro: ser útil.

La disposición de los capítulos se ha efectuado por orden alfabético de temas globales de análisis. En cada uno de ellos se describen varias técnicas analíticas que pueden ser aplicadas según las disponibilidades de equipo y personal.

En cuanto se refiere a la distribución de cada análisis, se ha procurado separar perfectamente el principio del método, los reactivos necesarios, la técnica operativa y los cálculos. En algunas técnicas, se ha introducido un apartado de comentarios, para ampliar el tema tratado. También se resumen algunas notas aclaratorias del autor, en el apartado de observaciones.

En lo referente a reactivos, los productos que se indican deberán ser de la calidad: reactivo para análisis. Cuando se hace referencia al agua, para diluciones u otras aplicaciones, siempre se refiere a: agua destilada.

Todos los volúmenes que deben medirse con exactitud, en el libro se expresan con dos decimales, por ejemplo: 10.00 mL.

Al final del texto, se recogen una serie de tablas que pueden ser de gran ayuda para el lector.

He de agradecer, sobremanera, a D. Santiago Minguez Sanz, Doctor Ingeniero Agrónomo, Director de la Estación de Viticultura y Enología de Vilafranca del Penedès, el aceptar presentar esta humilde aportación, a la ardua labor del analista.

TABLA XX

Equivalencias termométricas.

Sitúe en la columna central, en negrita, el valor (Celsius o Fahrenheit) que desea convertir.

En las columnas derecha o izquierda hallará el equivalente deseado.

**TABLA XXII**

Equivalencias de las unidades inglesas y americanas con el sistema métrico

**LONGITUD:**

Pulgada (inch, in, ")	= 0.0254 m	1 mm	= 0.0394 in
Pie (foot, Ft, ')	= 0.3048 m	1 cm	= 0.3937 in
Yarda (yard, yd)	= 0.9144 m	1 m	= 1.0936 yd
Milla (mile, mi)	= 1.6094 km	1 km	= 0.6114 mi

**SUPERFICIE:**

Pulgada <sup>2</sup> (sq in)	= 6.4516 cm <sup>2</sup>	1 cm <sup>2</sup>	= 0.135 sq in
Pie <sup>2</sup> (sq foot)	= 0.0929 m <sup>2</sup>	1 m <sup>2</sup>	= 10.7639 sq ft
Yarda <sup>2</sup> (sq yd)	= 0.8361 m <sup>2</sup>	1 m <sup>2</sup>	= 1.1940 sq yd

**VOLUMEN:**

Pulgada <sup>3</sup> (cu in)	= 16.3872 cm <sup>3</sup>	1 cm <sup>3</sup>	= 0.0610 cu in
Pie <sup>3</sup> (cu ft)	= 28.3168 dm <sup>3</sup>	1 dm <sup>3</sup>	= 0.0354 cu ft
Yarda <sup>3</sup> (cu yd)	= 0.7646 m <sup>3</sup>	1 m <sup>3</sup>	= 1.3080 cu yd

**CAPACIDAD:**

Pint GB (imperial) (pt)	= 0.5683 L	1 L	= 1.7621 pt (GB)
Pint U.S.A. (U.S. pt)	= 0.4732 L	1 L	= 2.1134 pt U.S.A.
Galón GB (gal GB)	= 4.5459 L	1 L	= 0.2200 gal GB
Galón U.S.A. (U.S. gal)	= 3.7854 L	1 L	= 0.2642 gal U.S.A.

**PESOS:**

Sistema «avoirdupois» (AV)			
Grain (gr)	= 1/7000 lb	= 64.7989 mg	1 kg = 15.4327 gr
Ounce (oz)	= 28.35 g		1 kg = 35.274 oz AV
Pound (lb)	= 16 oz	= 0.4536 kg	

**Sistema «troy» = apothecary (AP)**

Grain (gr)	= 1/7000 lb	= 64.7989 mg	1 g = 32.1512 oz AP
Ounce (oz)	= 480 gr	= 31.103 g	1 Kg = 2.6795 lb AP
Pound (lb)	= 12 oz	= 0.3732 kg	1 g = 15.4327 gr

**PRESIONES:**

Pulgada de agua	= 0.00254 kg/cm <sup>2</sup>	1 kg/cm <sup>2</sup> = 14.2227 psi
Libra pulgada cuadrada (psi)	= 0.07031 kg/cm <sup>2</sup>	
Libra pie cuadrado (psf)	= 4.8824 kg/m <sup>2</sup>	1 kg/m <sup>2</sup> = 0.2048 psi
